

What is claimed is:

1. A wireless display system comprising:

plural personal computers having wireless communication function; and

5 a wireless display having wireless communication function and display function,

wherein screens of some of the plural personal computers are displayed in the display unit of the wireless display through wireless communication.

10 2. The wireless display system of claim 1,

wherein screens of some of the plural personal computers are displayed simultaneously by dividing the display unit of the wireless display.

3. The wireless display system of claim 1,

15 wherein when changing over and displaying the screens of plural personal computers in the wireless display, the screen is changed to a desired personal computer according to transmission of a specific code from the desired personal computer, or information identifying the desired personal computer is displayed.

20 4. The wireless display system of claim 1,

wherein the wireless display further has an input function, and the plural personal computers are operated through wireless communication by using the input function of the wireless display.

5. The wireless display system of claim 4,

25 wherein some of the plural personal computers are operated by simultaneously displaying the screens of some of the plural personal computers by dividing the display unit of the wireless display.

6. The wireless display system of claim 4 or 5,
wherein the wireless display further includes a touch panel,
and the touch panel has the input function.

7. The wireless display system of claim 6,
5 wherein a common operation screen of plural personal
computers is displayed in the wireless display, and same operation
is done simultaneously in the plurality of personal computers.

8. The wireless display system of claim 6,
wherein a desired personal computer to be operated is
10 specified by touching the personal computer screen displayed in the
wireless display by the touch panel.
